Software engineering graduate and full-stack developer working with Next.js, React Native and PostgreSQL. Looking for a graduate or junior engineering role in Lagos or remote.

PROJECTS

Swiftplate · Food delivery platform — swiftplate-platform.vercel.app
Next.js, React Native, PostgreSQL, JWT

- Built customer and rider apps in React Native, plus restaurant and admin dashboards, all on one Next.js API.
- Protected every API route with JWT sign-in and role checks, so each role can only do its part of an order.
- Modelled orders as a state machine from placed to delivered, logging every status change for the admin.
- Priced every order on the server and froze item prices at checkout, so menu changes never alter past orders.

STRIDE · Online sneaker store and shop back office (demo) — stride-store-ng.vercel.app
Next.js, PostgreSQL, Paystack API

- Built the store and its Paystack checkout; the server sets every price and verifies each payment.
- Built the back office: sales at the till, stock by size and staff roles, with no double-selling.

FireSafe · IoT fire and gas alarm, final-year project
ESP32, C++, Flask, Supabase, React Native, TypeScript

- Co-built every layer with one teammate: ESP32 firmware in C++, a Flask API on Supabase and a React Native app.
- The ESP32 reads gas and temperature sensors, sounds a buzzer at danger levels and sends readings over Wi-Fi.
- Phones get warning, urgent and critical alerts, plus a live dashboard and alert history.

Golden Hour and Terra House · Concept websites for a café and a hotel
HTML, CSS, JavaScript — goldenhour-demo.netlify.app · terrahouse-demo.netlify.app

- Built menus, room rates, and order and booking forms that go straight to the business's WhatsApp.

EXPERIENCE

IT Technician Assistant (SIWES) · SIFAX Group, Tin Can Island, Lagos — 2025

- Added staff to the company domain, created their user profiles and set up admin accounts.
- Set up and repaired staff computers, finding faults and installing Windows and software.
- Ran and crimped LAN cables, kept the cabling organised, and fixed network and internet problems.
- Helped staff with everyday IT issues, from email and account access to printers.

EDUCATION

B.Sc. Software Engineering · Bowen University, Iwo, Osun State — 2026
NYSC: awaiting mobilisation

SKILLS

Languages	JavaScript, TypeScript, Python, C++, SQL
Web and mobile	React, Next.js, React Native (Expo), Node.js, Flask
Data and payments	PostgreSQL, Supabase, Paystack API
Hardware	ESP32, Arduino, gas and temperature sensors
IT support	Computer setup and repair, LAN cabling, domain user accounts
Tools	Git, GitHub, Vercel
